A horse is measured from the top of its withers not the top of its head, to the ground.

These majestic horses came straight out of the rural shires of England, such as Cambridgeshire and Lincolnshire, more than 800 years ago to ride into war, work on farms and haul heavy loads

Some facts:

Horses can sleep both lying down and standing up.

Horses can run shortly after birth.

Domestic horses have a lifespan of around 25 years.

A 19th century horse named 'Old Billy' is said to have lived 62 years.

Horses have around 205 bones in their skeleton.

Horses have been domesticated for over 5000 years.

Horses are herbivores (plant eaters).

Horses have bigger eyes than any other mammal that lives on land.

Because horse's eyes are on the side of their head they are capable of seeing nearly 360 degrees at one time.

Horses gallop at around 44 kph (27 mph).
